AUDIO/VISUAL:

Jim Pope (435) 559-8277 suwt2020@gmail.com From the Office of the President--

Last fall, after Thanksgiving, Cedar City had their Historic Downtown Holiday Lighting Ceremony, which included a Christmas Market. The club was invited to have a booth to sell a variety of items. All proceeds were given to Canyon Creek Services. Club members made the items to sell. We, the club members, put in a lot of work into making those items. Several club members spent a very cold day at the booth. Eventually we donated over \$1200 to Canyon Creek Services. Over a third of that came from sales that did not occur at our booth. I am willing to admit that I was disappointed. I was not alone in my disappointment. The amount we earned for Canyon Creek Services did not reflect the effort we put into the event. This year we decided to donate \$1500 to Canyon Creek Services and forego the Christmas Market.

Last spring Jim, Will and myself, visited the Canyon View High School woodshop. They have five midi lathes and two Powermatic lathes. For all those lathes they had one Apprentice chuck with 1"-8 threads. We, Joe, Jim and myself, decided the club should buy two Vicmarc 120 chucks and two Apprentice chucks for the school. At our last meeting you saw the chuck tote trays made by Will. The tote trays will help them keep track of all the chuck parts. We appreciate Will making the tote trays. We want students to have more viable options to use all those lathes.

Gayle Adams arranged an opportunity for the club to harvest aspen on the mountain. The wood handed out at our meeting was from the aspen we harvested. Six of us, with an average age of 82, cut down a single standing dead aspen tree which required four and one half pickup truck loads to haul away. It is beautiful wood. We saw fun turnings from that wood at our meeting and we will be seeing turnings from that wood at our meetings for months.

We are making the application for membership to Southern Utah Woodturners available on our website as well as including with the newsletter mailing as a separate attachment. Please mail form, with dues check (\$30) for 2024, to Glenn Pearson at the address on the application so he may update our records for the membership roster.

The demo of the month was: A discussion of various multi axis Christmas trees by Joe Peacock and Leon Olson. The discussion included instructions and how to get around issues that cause problems.

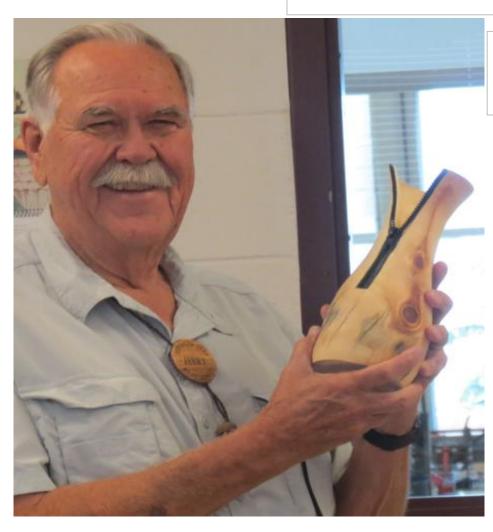

Joe Peacock holding one of several trees he turned for the meeting. In the bottom right corner of the photo you see five trees that were turned on multiple axes and painted. Joe talked about changing the direction the blank is held on the lathe to make it easier for him to make the required cuts. He also talked about issues with painting the notches cut into the side of the trees. Acrylic craft paint is cheaper and does work better than spray paint even if it did not work as well as Joe expected.

In this photo Leon is holding a segment in his left hand and a dowel in his right hand. There are three trees in the photo made of segments glued onto a dowel. The one by his right hand is the third one he made and the only one he liked. The other two trees in the lower left are multi axis trees. The one in the bottom left, the axes are on a straight line. The tree just to the right, the axes are on a circle. Leon has written instructions for four of the trees they discussed and has emailed them to the club members.

Show & Tell

Jerry Keller Aspen vase with a zipper

Jim Pope Segmented bowl in Southwest design

George Mason
Small walnut bowl that flys

Will Arcularius
Coca Cola retirement trophy
bottle and base is aspen and a
square chipboard plate

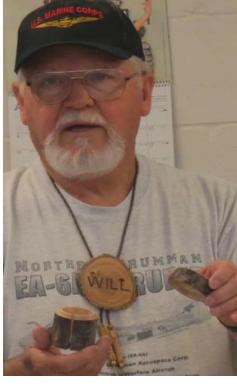

Will Arcularius
Decorative gavel for the Cedar
City Chamber of Commerce, an
aspen plate, an aspen box

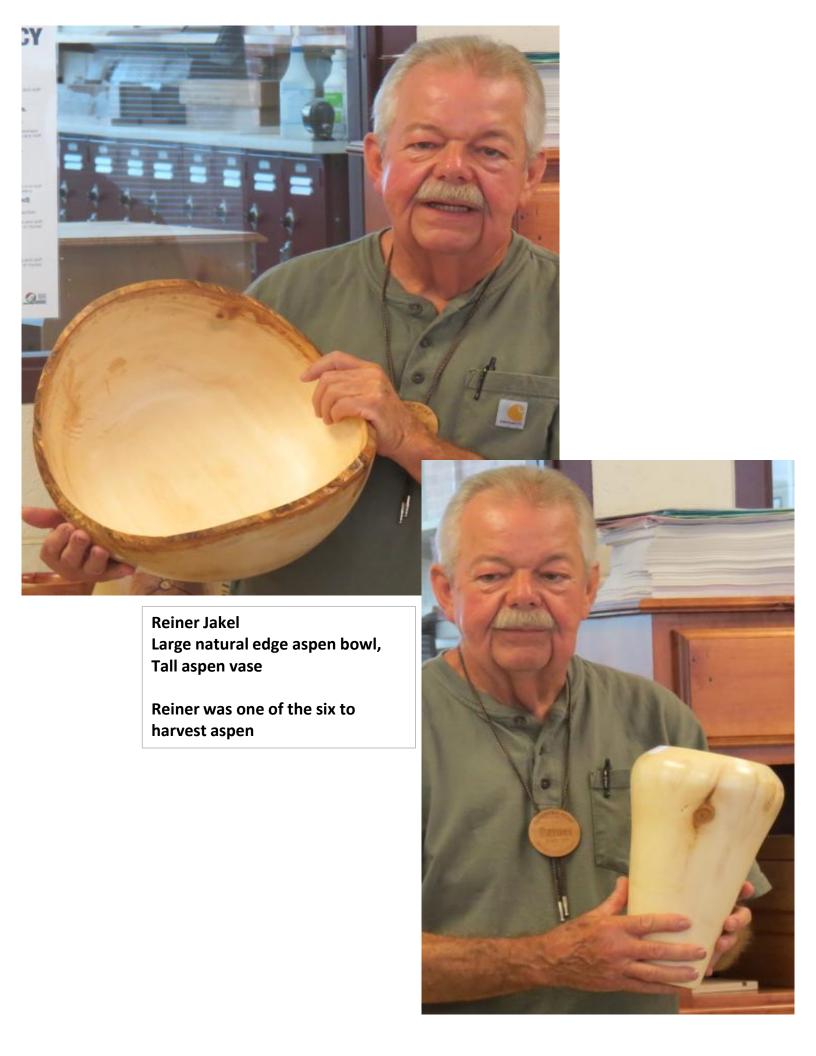

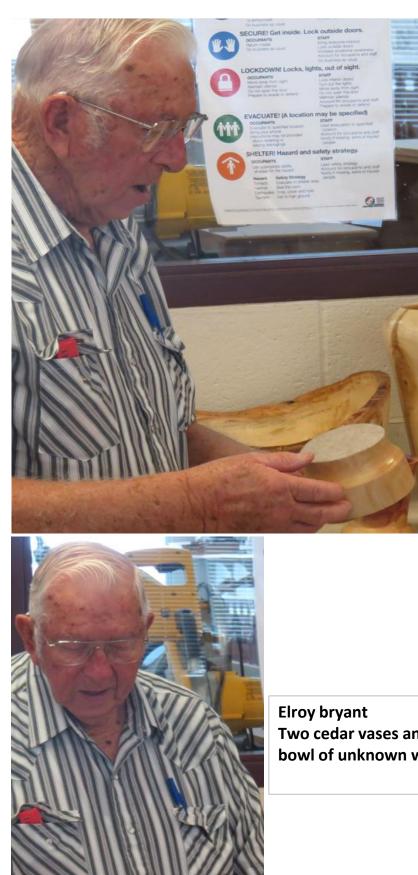

Bruce Sharp Walnut vase made from a branch

Joe Peacock 14 Christmas trees, five are multi axis trees, made from a variety of woods

Two cedar vases and a bowl of unknown wood

Chuck Zimmerman Pen and pencil set

Karl Bradshaw laser engraved toy trucks for his great grandson

Will Arcularius

Tote trays for the Vicmarc and Apprentice chucks the club
bought for Canyon View High School

TIPS AND TRICKS Leon Olson

Lathe posture

At the AAW symposium in Portland this year Janice Levi gave a presentation on lidded boxes with finials. She began by talking about proper spindle height and back pain. When she had back issues, she went to her doctor. He had her explain how she stood and moved at the lathe. She turns a lot of boxes. With the spindle at her elbow height she had to bend over to turn. Then she twisted to present the tool to cut into the wood. Finally she was bent over in a twisted position to see into the turning. All of which can cause back pain.

AMERICAN WOODTURNER October 2019 Vol. 34.5: 36-37

"Thoughts on lathe height So, from a functional movement perspective, the most effective approach is a bit more complicated than just raising the spindle to a height of X. A more comprehensive solution that accounts for the way a turner moves his/her body, in combination with tool presentation and spindle height, is best." Eric Lofstrom, Washington

Evidently the spindle should be higher than your elbow. You should also stop atleast every hour and do some stretching exercises. Janice put both hands on the ways of the lathe and in a bent over position stretched out her lower back. She also mentioned drinking water to stay hydrated.

When I was still working I would do exercises while the CNC milling machine ran. The younger guys laughed at me. I smiled and told them that when they got to my age if they did not do what I was doing they would have difficulty moving at all. I retired after I turned 70.

AMERICAN WOODTURNER October 2019 Vol. 34.5: 32-35

"To get an idea of the prevalence of low back pain among woodturners and to understand its impact on turning, I conducted a survey of members of three Washington, D.C., area clubs. There were 67 respondents of whom nearly three-quarters (49) currently have or have had back pain that limits their turning. More than half (28) of these turners saw a healthcare provider about their pain, had one or more imaging studies, and were given a specific diagnosis. These individuals received a total of 36 diagnoses, with many receiving more than one. A herniated disk was the most common (14), followed by lumbar spine degeneration (5) and spinal stenosis (5). Respondents weren't asked their age. It is safe to assume the average age was above 60, but any of these problems may appear in younger individuals." Rich Foa

While I was still working I developed a compressed disk which caused me a lot of pain. With the help of a physical therapist my body was able to repair the disk. I am a lot more careful about how I do things now. Your physical comfort while turning is important and does effect your ability to turn. Change the height of your lathe if you experience back issues. Stop and stretch often. Keep youself hydrated. Your productivity will improve and turning will be a more pleasant experience.

WHY WE LIVE IN SOUTHERN UTAH

Brian Head Peak Trails

Motion Industries is near Costco. They sell belts and bearings among other things. This location is a sales office but they gets things quickly.

Mike's repair is not far from Canyon View High School but it is on the north side of the freeway. There is a road under the freeway from the school. The website is mikestool.com
You need to be careful to get it exact. There is another website that is one letter different.
